David Simmerman

Software Engineer

david@simmerman.tech·simmerman.tech·github.com/DavidSimmerman·linkedin.com/in/david-simmerman

Software engineer who makes complicated things feel simple — six years shipping enterprise AI for the world's biggest brands, integrations developer to director in five years.

EXPERIENCE

Zoovu (formerly XGen AI) — Composable AI for enterprise e-commerce — in production for Gucci, Sonos, Valentino, Armani & Coach

Senior Software Engineer May 2026 – Present

- Carrying the composable AI platform and its enterprise clients through the 2026 Zoovu acquisition — recommendations and search for some of the world's biggest brands.

Director of Frontend Development Feb 2023 – May 2026

- Led the four-person team building the composable AI platform — non-technical users configure, build, train, and deploy AI models.
- Shipped API sandboxes, in-app element code editors, and a full analytics suite.
- Cut AWS costs 30%.

VP of Integrations 2022 – Feb 2023

- Ran a team of eight integration developers; owned prioritization and delivery across every enterprise client.
- Built an email image-generation service — personalized recommendations render at open time, zero upfront compute.

Integrations Developer Nov 2020 – 2022

- Built the JavaScript SDK and DOM event-listener library used in every client integration.
- Built a universal product sync — any file type, format, or transfer method (HTTPS/FTP/API) — with data-mutation tooling that normalizes any client catalog into the platform.

Wisely Optimize — Basketball intelligence for Division 1 programs — Houston, Baylor, Ole Miss, Oklahoma & Oklahoma State

Basketball Engineer (part-time) Mar 2026 – Present

- NBA front-office process and predictive analytics applied to college rosters — roster-construction targeting and season-long strengths/weaknesses analysis for coaches and GMs.
- Built the platform's AI agent for natural-language navigation and led a ground-up redesign of the entire frontend.

PROJECTS

CBB Composite Rankings· cbbcomposite.com — College basketball rankings compositing KenPom, EvanMiya, BartTorvik, and NET — team profiles, bracket builder, and simulator. 150+ users perfected their brackets last March.

Mile A Day· mileaday.run — iOS running app built with a friend — daily-mile streaks, milestone medals, and head-to-head friend competition. Live on the App Store.

Discovery — Music app that breaks Spotify's shuffle feedback loop — rate songs, control the shuffle algorithm, surface new music by taste instead of listening patterns.

SKILLS

AI & LLMs — LLM agents & RAG in production · Claude & OpenAI APIs (tool use, streaming, evals) · prompt & eval pipelines · MCP integrations

Frontend — React & Next.js · Svelte & SvelteKit · TypeScript · Tailwind

Backend & data — Node.js · Python · Postgres (Drizzle) · predictive analytics

EDUCATION

Michigan State University — Computer Science coursework, followed by continued online CS study.
